Front End | HTML5 | CSS3 | WPF | Windows Forms

Back End | C# | ASP.Net Core | MVVM & MVC | Entity Framework Core | SQL | Firebase | AJAX | JSON

Testing/Deployment | Microsoft Azure | Github Actions

Developer Tools | Visual Studio 2022, Github, Jira, Slack

EXPERIENCE & PROJECTS

Personal Website: <https://zach-bray-portfolio.azurewebsites.net> (for additional information and projects)

Full Stack Developer | MyAnimeVault

Oct 2023 – Dec 2023

Website that allows users to track their favorite anime series

C# | ASP.NET | Entity Framework | Firebase

- Developed an interactive anime management web application using ASP.Net Core MVC and the MyAnimeList API, offering users a platform to explore, rate, and track their favorite anime series.
- Implemented firebase authentication and authorization to secure user accounts/sessions and facilitate seamless login functionalities within the application.
- Engineered and managed the Azure SQL Database to store and organize user data. Utilized Entity Framework to simplify database interactions and ensure optimized performance.
- Leveraged Microsoft Azure's development features such as Azure Key Vault for secret storage and Azure App Services for site deployment.

Full Stack Developer | Portfolio Website

Sep 2023 – Oct 2023

Website showcasing myself as a developer using ASP.Net core

C# | ASP.Net | HTML5 | CSS3

- Utilized HTML and CSS to develop a visually appealing and user-friendly interface that is also responsive on mobile devices.
- Added a contact form for user inquiries, facilitating secure server-side communication and networking opportunities.
- Deployed the website on Microsoft Azure App Service, leveraging cloud infrastructure for reliability and scalability.

Full Stack Developer | Bug Tracker

Mar 2023 – Aug 2023

Bug tracking software using WPF and Entity Framework

C# | WPF | Entity Framework | SQLite

- Created an intuitive and user-friendly interface with WPF, resulting in a streamlined bug reporting and management process for both technical and non-technical users.
- Implemented a robust data model using Entity Framework, allowing for efficient storage, retrieval, and manipulation of bug data in an SQLite database.
- Incorporated essential bug tracking features such as issue creation, assignment, status tracking, and reporting, providing a comprehensive tool for software quality control.

EDUCATION

University of Central Florida- Bachelor of Science, Digital Media (Computer Science Minor), 3.8 GPA 2022
